"Normally this would happen in our bodies"

SICKNESS CAN LIVE IN THE BECOMING SICK BUT CAN D TO SOMEONE ELSE.

TESTED TO SEE IF IT IS IN UR BODY.

someone else by

"Don't be a fool like our 'hero'."

Question 3

Which of the following found in our blood helps the body fight infections?

- a) Red blood cells
- b) Blood vessels
- c) Viruses
- d) White blood cells
- e) CD-4 cells

"Unlike 'hero', do not be a fool."

Copyright

In his blood grows the ENEMY... The feared HIV virus

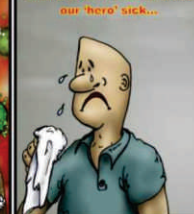

The HIV grows inside the White Blood cells - eventually causing them to die.

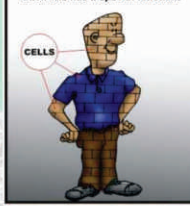

When enough of the white blood cells (CD-4) die there are not enough left to fight other sicknesses such as TB.

Even a small cold can make our 'hero' sick...

Our 'hero's' body is made up of millions and millions of cells. These are the bricks that build his body. Each one has a special function.

In the blood we find Red and White blood cells.

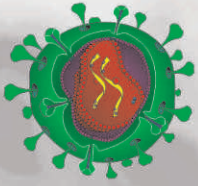

The red cells are the workers. They carry the oxygen for all the body's cells to live.

The white blood cells are the Soldiers. They fight infection and sickness.

**EVERY PART OF OUR BODY
IS MADE UP OF CELLS.**

sample

**BLOOD CONTAINS DIFFERENT CELLS.
SOME, LIKE THE RED BLOOD CELLS, CARRY
OXYGEN SO WE CAN BREATHE.**

**OTHERS, LIKE THE WHITE BLOOD CELLS HELP
THE BODY FIGHT INFECTIONS.**

**This silent germ is called HIV and causes
AIDS. It is called this because it attacks the
cells of the body's immune system. These
are the WHITE BLOOD CELLS also
called CD-4, T helper or 'soldier cells'.**

**HIV hides out in these (CD-4 cells)
where the body or medicines
cannot find it.**

LIFE IS ABOUT MAKING THE RIGHT CHOICES

Because these are the ones that will decide who you are and what you will become...

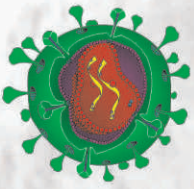

Some temptations are so desirable they are simply much too hard to resist

NOW LET'S TAKE A LOOK AT OUR 'HERO' AND SOME OF HIS CHOICES IN LIFE...

This story is about a fictitious character we have named 'Hero' who unfortunately made the incorrect choice.

**SOMETIMES
THE HI VIRUS (HIV) CAN LIVE
IN THE BODY WITHOUT A PERSON BECOMING
SICK BUT IT CAN STILL BE PASSED TO SOMEONE
ELSE**

**YOU CAN GET TESTED TO SEE IF HIV IS IN
YOUR BODY**

**THE BODY MAKES 'ANTIBODIES' TO FIGHT THE VIRUS.
THESE ANTIBODIES CAN TAKE A FEW WEEKS TO SHOW
UP AND THIS IS WHY IT IS CALLED THE 'WINDOW
PERIOD'. MOST HIV TESTS LOOK FOR THESE
ANTIBODIES**

**A POSITIVE TEST RESULT MEANS THE VIRUS AND
ANTIBODIES ARE PRESENT IN THE BODY. A NEGATIVE
TEST RESULT MEANS THEY ARE NOT**

question 2

HIV may be passed to someone else by

- a) Sneezing
- b) Body fluids
- c) Sex without a condom
- d) Blood

question 3

Which of the following found in our blood helps the body fight infections?

- a) Red blood cells
- b) Blood vessels
- c) Viruses
- d) White blood cells
- e) CD-4 cells

***Unlike 'hero', choose not to make
unwise choices.**

sample

Normally this would happen in our Body...

sample

But Because of the influence of the HIV...

the OPPOSITE happens - this is the outcome now..

sample

***Don't make unwise choices like our 'hero'.**
